

A Case for an IPA Symbol for the Dental Plosive:

The Example of Modern Burmese

Outline

Modern
Burmese is said
to have a dental
fricative [θ]

Acoustic studies
reveal it to be a
dental plosive
[t̪]

Dental/alveolar
plosive contrast

Many other
languages have
this contrast

There should be
a symbol for the
dental stop like
there is for the
fricative

Historical Background

- ◇ The Burmese letter ၵ is traditionally associated with */s/.
- ◇ In 1776, the sound was not produced as a typical alveolar [s].
 - ◇ Entry from 1776 *Alphabetum Barmanorum*:
 - ◇ ၵ Sa. “*Ut audire est in iis, qui ex linguae impedimento non possunt pronunciare.*” (p.5)
 - ◇ Entry from 1787 *Alphabetum Barmanorum*:
 - ◇ “*absque sibilo; uti apud nos quoque in nonnullis auditor vitio linguae vel educationis.*” (p.28)
- ◇ By 1925, the sound seems to have made the transition to a plosive.
 - ◇ Entry from Armstrong & Pe Maung Tin’s *A Burmese Phonetic Reader*:
 - ◇ “[G]ives the impression of a weak plosive rather than of a fricative” (p.17)

Modern Classifications

Fricative	Affricate	“Gives the impression of a weak plosive”	Plosive
Armstrong & Pe Maung Tin (1925) Aung Naing Win (2000) Bradley (2011) Burling (1967) Chang (2009) Firth (1936) Green (2005) Kato (1998) Myint Soe (1999) Okell (1994) Roop (1972) Than Than Win (1998) Watkins (2001) Wheatley (2003)	*Bradley (“slight preaffrication”) *Chang *Watkins *Wheatley	*Armstrong & Pe Maung Tin *Chang *Than Than Win	Shiwaruangularote (2000) *Kato

Acoustic Investigation

- ◇ Native speakers of Yangon Burmese
- ◇ Ages 19-38 (+ a 67-yr-old)
- ◇ Word-initial consonants of nouns
- ◇ Isolation and intervocalic frame
- ◇ Word-guessing game
- ◇ Four main speakers, plus two additional for palatograms and linguograms

Articulatory Investigation: Palatography

Conclusion: Dental Plosive

The Modern Burmese ဆ is realized as an **unaspirated stiff laminal denti-alveolar plosive** [t̪].

- ◇ May be realized interdentially when the speaker is asked to focus on the sound.
- ◇ Patterns with other plosives in becoming a slack plosive or an approximant when weakened.

Implications:

- ◇ **Transcriptions** of Modern Burmese should use [t̪] for ဆ , not [θ], [t̪θ], etc.
- ◇ **Instructional materials** should be modified to reflect the Burmese dental plosive is not the same as English *th* [θ ð].

Phonemic Status – Allophone

- ◇ Some linguists include a “voiced” version in their charts of Burmese phonemes, e.g. Wheatley 2003, Watkins 2001 /ð/.
 - ◇ Wheatley notes: “but for a very few cases [...] ð is a result of word or phrase internal sandhi” (p.199)
 - ◇ The few cases he cites (words beginning with the word သို့ [d̥o̯], used only in formal register conjunctions) may be explained by the following dictionary entry:
 - ◇ “short form of ဤသို့ [ʔi.d̥o̯] and ထိုသို့ [tʰo.d̥o̯] ‘in like manner’” (Myanmar Language Commission, p.505)
- ◇ There are no minimal pairs.
- ◇ Therefore, [d̥] is an **allophone** of /t̥/.

Phonemic Status

Speaker M2 saying $\omega\omega\delta$: [ḍḍḍḍ] 'news' (on the left) and $\omega\delta$: [ḍḍḍḍ] 'daughter'

Other Dialects

- ◇ Myeik dialect (Kato & Khin Pale 2012)
- ◇ Danu
- ◇ Rakhine (example below: ခံ [t̪æ̃] တောင့် [tɔ̃])

Phonemic Status

Contrast alveolar plosive /t/ with /t̚/

1. တန်	[tǣ]	‘to be worth, worthy’	1. သန်	[t̚ǣ]	‘to be strong, proficient’
2. တီး	[t̚i]	‘to play (instrument)’	2. သီး	[t̚i]	‘to bear fruit’
3. တင်	[t̚i]	‘to raise, lift up’	3. သင်	[t̚i]	‘to teach, learn’
4. တိုက်	[taiʔ]	‘building’	4. သိုက်	[t̚aiʔ]	‘nest; buried treasure’
5. တဲ	[t̚é]	‘hut’	5. သဲ	[t̚é]	‘sand’
6. တာ	[ta]	‘to measure’	6. သာ	[t̚a]	‘to exceed; be pleasant’

Phonemic Status

Contrast alveolar fricative /s/ with /t̪/

1. အစစ် [ʔəsiʔ] ‘real, genuine’
2. စံ [sã] ‘standard, model’
3. စီး [sí] ‘to ride’
4. အစား [ʔəsá] ‘food’

1. အသစ် [ʔət̪iʔ] ‘new’
2. သံ [t̪ã] ‘iron, metal’
3. သီး [t̪í] ‘to bear fruit’
4. အသား [ʔət̪á] ‘meat, flesh’

Southeast Asian Languages Reported to Contrast Dental and Alveolar Plosive(s)

Sino-Tibetan

- ◇ Burmese
- ◇ Para Naga
- ◇ Tangshang Naga
- ◇ Koki Naga
- ◇ Falam Chin
- ◇ Geker/Gekho
- ◇ Kayah
- ◇ Kayan - some dialects
- ◇ Paku Shokho

- ◇ Palaychi
- ◇ Gebah
- ◇ Kayaw
- ◇ Western Pwo Karen
- ◇ Bwe Karen?
- ◇ Sgaw Karen-some dialects?

Austronesian

- ◇ Javanese
- ◇ Muna
- ◇ Kulisusu

Others?

New Symbol Needed?

UCLA Phonological Segment
Inventory Database:

- ◇ Contrast in dental/alveolar plosives over **2x as common** as dental/alveolar fricatives

IPA Principle 4a:

- ◇ “When two sounds occurring in a given language are employed **for distinguishing one word from another**, they should wherever possible be represented by **two distinct symbols without diacritics.**”

If it's possible for the fricatives to have their own symbols, then why not for the plosives?

Proposed IPA Symbols

[τ] voiceless dental plosive

[δ] voiced dental plosive

- ◇ Not Roman, but Greek is second choice
- ◇ Some resemblance to [t d]
- ◇ Already in Unicode
- ◇ Lowercase
- ◇ Correspond to Classical Greek sounds
